FYP IDEAS 1 - POSSIBLE EMPLOYMENT AREA – SKILLS ANALYSIS

You should try and identify at least one, and preferably 3, potential graduate jobs you could realistically apply for next year when you finish your degree. Obviously, at this stage in your career you will probably not fit all the technical and personal criteria but try to think ahead. Next, you need to match up your current skills and find out where your 'gaps' are and consequently what areas you may need to develop further in your final year. Finally, see if you can identify a potential FYP project, or type of FYP project, that might help you bridge that gap. If you can do this for 3 potential jobs you may start to see a pattern forming and a potential FYP emerging from your analysis.

Job Title	Technical Skills Required (possibly from job spec)	Other Skills Required (possibly from person spec)	Where do my current skills match up?	What areas would I need to develop over the next year?
1				
What type of project might help me address the 'skills gap' identified above?				
2				
What type of project might help me address the 'skills gap' identified above?				
3				
What type of project might help me address the 'skills gap' identified above?
